

"Building of Hope

**Siloam Hospitals Semanggi
and
the Mochtar Riady
Comprehensive Cancer Centre**

On 12 May 2007 Siloam Hospitals Group broke ground on a new hospital development in Central Jakarta – "The Building of Hope" – Siloam Hospitals Semanggi and Mochtar Riady Comprehensive Cancer Centre (MRCCC) which will be Indonesia's first private comprehensive cancer treatment centre with state-of-the-art equipment.

The Mochtar Riady Comprehensive Cancer Centre will be the most fully equipped cancer centre in Indonesia, able to treat a wide range of cancer types. DR. Mochtar Riady said the vision for the MRCCC is "to provide an international standard private cancer and specialist hospital in Central Jakarta, using state of the art equipment that incorporates the latest generation of smart IT systems."

**"Never deprive someone of hope,
it may be all they have"**

DR. Mochtar Riady

Cancer is one of the leading causes of death in many South East Asian countries. In Indonesia, it is now ranked as the sixth leading cause of death. Nearly 800,000 people are afflicted with various forms of cancer every year in Indonesia, but cancer services are lacking. Only a few hospitals provide radiation services in Indonesia. Some treatments such as Radio-immunotherapy (RIT) and high dosage brachytherapy are at present not provided due to lack of facilities and expertise. No facility in Indonesia currently provides Positron Emission Tomography (PET) imaging for early cancer detection.

On completion the MRCCC will adopt a preventative focus through health screening, but will also be the first facility in Indonesia to offer break-through technologies which are at the forefront of cancer treatment and cancer diagnostics globally. Amongst the other firsts for the MRCCC are palliative care & oncology wellness centre, high dose brachytherapy, radio-immunotherapy (RIT), radiopeptide therapy, molecular imaging with PET/Computed Tomography (PET/CT) and Single Photon Emission Computed Tomography/CT (SPECT/CT) scanning.

compassion

It will also provide chemotherapy, complementary therapy, Linear Accelerator treatment, Multi Slice CT, High field strength MRI, Angiography, in-house clinical trials and integrated IT and PACS/RIS. We also hope to develop at the MRCCC training in medical oncology, radiation therapy, cancer imaging and surgical oncology.

The "Building of Hope" is a new 29-story, 210-bed specialist hospital, which incorporates the MRCCC. The total floor area of the new hospital is 53,000 m² and the facility is expected to be operational by Q4 2009.

Located near Plaza Semanggi, The Aryaduta Apartments and other, international 5-star hotels in Central Jakarta, Siloam Hospitals Semanggi and MRCCC will serve the needs of International and Indonesian patients.

Once open, Siloam Hospitals Semanggi and MRCCC will submit itself to international accreditation by the US-based, Joint Commission International (JCI).

Siloam Hospitals Semanggi and MRCCC will be the one of the top ten tallest hospitals in the world. It will be a landmark for Jakarta in terms of its height and appearance and an icon for international standard cancer treatment in Asia.

The MRCCC will provide access to screening for:

- Breast cancer
- Colorectal cancer
- Cervical cancer
- Lung cancer
- Head & neck cancer and many other forms of cancer
